

Gregory N. Haidemenopoulos, is Professor of Physical Metallurgy and Director of the Laboratory of Materials (LoM) at University of Thessaly, Greece since 1992. Currently he is serving his sabbatical as a Professor at the Department of Mechanical Engineering at Khalifa University, Abu Dhabi, UAE. His research is concerned with processing-structure-properties in metallic materials, dealing mainly on computational alloy and process simulation with applications in the design of homogenization of extrudable aluminum alloys, the design of medium-Mn steels and the thermomechanical process design of HSLA steels as well as TRIP steels. He is the developer of the ALLOYNEERING approach for the computational design of metallic alloys (www.alloyneering.com) in the framework of integrated computational materials engineering (ICME). In addition to teaching and research, he has provided consulting services to industry in the fields of process design, failure analysis, materials selection and corrosion control. He serves as an expert for the European Commission RFCS and HORIZON 2020 research programs. He has supervised several PhD students and has earned the University of Thessaly's Mechanical Engineering Excellent Teaching Award for the years 2007, 2008, 2009, 2011, 2014, and 2015. He has published a textbook entitled "Physical Metallurgy: Principles and Design" (CRC Press, 2018), 10 book chapters, 80 papers in refereed journals, and presented many keynote and invited lectures worldwide. He received his PhD in Metallurgy, MSc in Metallurgy, and MSc in Naval Architecture and Marine Engineering from MIT (USA).
